Senior Software Developer

Location: Dublin

Full-time

At Lonely Planet we live to travel. Everything we do is designed to inspire and enable travellers to get out there, connect with the world and have great experiences. Across all areas of Lonely Planet, we look for talented people who share our passion.

We have a great opportunity for a Senior Software Developer to join our team based in our growing Dublin office. This role is offered as a permanent full-time role reporting to the Development Team Lead SPP.

The Senior Software Developer is responsible for providing technical solutions, designs and implementations for new and ongoing software development projects; ranging from the development of high traffic public-facing websites to internal shared content service solutions supporting multi-platform digital content distribution.

Using multiple programming languages and frameworks, the Senior Software Developer is expected to design solutions that ensure the delivery of business objectives and requirements. The role interacts closely with stakeholders from across the business (particularly the Online and Digital teams) and is responsible for both gathering and translating requirements into solutions, along with communicating complex technical concepts to non-technical audiences.

At Lonely Planet we are passionate about our products and the evolving technologies we use to build them. The Senior Software Developer will need

to share our passion for craftsmanship in software design and development and continuous improvement in the techniques, tools and languages we use; as well as have an appreciation for business objectives and delivering superior, innovative software solutions.

What we're looking for

- A full stack developer with proven software development experience and a passion for quality in a technology environment.
 - Working knowledge of the web, application frameworks such as Ruby on Rails, and single-page applications and associated technologies such as Javascript/CoffeeScript, Backbone, jQuery, HTML5.
 - Comfortable working with test-driven development, using automated testing frameworks and related tools (e.g: RSpec, Cucumber, Selenium, Jasmine, Mocha).
 - Experience with Continuous Integration and automated deployments to Amazon Web Services (using tools such as Chef, Rake, Capistrano, Jenkins, Git, S3, EC2, RDS).
 - Strong written and verbal communications skills, including the ability to effectively communicate technical and business problems/issues to a non-technical audience.
 - Strong interpersonal and relationship building skills within an Agile project teams. Ability to understand a technology problem in light of a broader product vision.
- I'm In!

Please ensure you submit a cover letter detailing your salary expectations along with your CV telling us why you'd like to join our team by 25th September 2015.
